

# Editorial

---

This issue of the IJEE (vol. 29, issue 6) is divided into two sections, the first being the second part of the special issue on the Impact of Collaboration between Academia and Industry on Engineering Education. My many thanks to Prof. Andrés Díaz Lantada for guest editing both parts. The second section of this issue has thirteen contributions addressing a variety of engineering education topics.

There were several other special issues published throughout the year, which included:

Computer-Aided creativity enhancement in engineering education guest edited by professors Gaetano Cascini and Noel Leon Rovira, Human Computer Interaction in Engineering Education guest edited by professors Miroslav Minović, Dušan Starčević, and Emil Jovanov, as well as Selected Papers from the 2012 International STEM in Education Conference, Beijing, P. R. China guest edited by professor Feng-Kuang Chiang.

This is the final issue of 2013 and I hope that the Journal served the engineering education community well this year as in previous years. I would like to express my gratitude to the authors who contributed important papers, the reviewers who devoted their time and expertise to maintain and enhance the quality of the authors' submissions, the guest editors who identified topics of current interest to engineering educators, and to our readers who showed continued interest in the Journal.

I hope that the Journal will continue to provide our international community with thought-provoking subject matter and build on the shared knowledge of engineering education, research and practice. I wish all of our readers, authors, guest-editors, and reviewers great success and growth for the New Year.

Ahmad Ibrahim
