

## Contents

### **Contributions in: Engineering Education Research, Service Learning, Distance Laboratories, Studio Courses, University-Industry Cooperation, Mechanics, Manufacturing Engineering, Electronic Engineering, Software Engineering, Mobile Technologies**

|   |         |  |
|---|---------|--|
| <b>M. S. Wald</b>   | 449     | Editorial  |
| <b>D. E. Schaad, L. P. Franzoni, C. Paul, A. Bauer and K. Morgan</b>  | 450–465 | A Perfect Storm: Examining Natural Disasters by Combining Traditional Teaching Methods with Service-Learning and Innovative Technology |
| <b>M. Helander and M. Emami</b>   | 466–479 | Engineering eLaboratories: Integration of Remote Access and eCollaboration   |
| <b>R. M. Counce, P. R. Bienkowski<br/>S. P. Singh, J. D. Randolph, R. T. Jubin<br/>B. E. Lewis, L. C. Markel, R. A. Reimer<br/>B. E. Murphree, R. A. Heckrotte<br/>and B. W. Anderson</b> | 480–487 | University Partnerships with Industry and Government   |
| <b>B. L. Kinsey, E. Towle, E. J. O'Brien<br/>and C. F. Bauer</b>  | 488–494 | Analysis of Self-efficacy and Ability Related to Spatial Tasks and the Effect on Retention for Students in Engineering                 |
| <b>R. B. Gorbet, V. Schoner and B. Taylor</b>   | 495–508 | Best Practices for Enabling Effective Cross-disciplinary Learning in Interdisciplinary Project Groups                                  |
| <b>E. Gomez, J. Caja, C. Barajas, M. Berzal<br/>and P. Maresca</b>  | 509–520 | Educational Programme for Virtual Calibration in Dimensional Metrology: Development and Evaluation                                     |
| <b>R. Stephen, D. S. Lay and J. D. McCowan</b>  | 521–528 | Using the Technology of University Buildings in Engineering Education  |
| <b>C. MacDougall, J. Fitzwilliam<br/>and M. Green</b>   | 529–539 | Floor Beam Testing Laboratory for Teaching Beam Bending Mechanics  |
| <b>L. R. Xu</b>   | 540–544 | In-class Paper Demonstrations and Experiments for Solid Mechanics Courses  |
| <b>B. D. Collier</b>  | 545–557 | An Experiment in Hands-On Learning in Engineering Mechanics: Statics   |
| <b>N. Fang, G. A. Stewardson, M. M. Lubke</b>   | 558–566 | Enhancing Student Learning of an Undergraduate Manufacturing Course with Computer Simulations  |
| <b>H. Artail</b>  | 567–580 | A Methodology for Combining Development and Research in Teaching Undergraduate Software Engineering                                    |
| <b>H. Hassan, C. Domínguez, J-M. Martínez<br/>A. Perles, J. Albaladejo and J-V. Capella</b>   | 581–591 | Integrated Multicourse Project-based Learning in Electronic Engineering  |
| <b>S. Porta, R. Cabeza, A. Villanueva<br/>and J. Navallas</b>   | 592–605 | Making Things Simpler in Circuit Theory  |
| <b>D. G. Walker, M. A. Stremler<br/>J. Johnston, D. Bruff and S. P. Brophy</b>  | 606–615 | Case study on the Perception of Learning when Tablet PCs are used as a Presentation Medium in Engineering Classrooms                   |
| <b>J. C. Chen, J. A. Kadlowec<br/>and D. C. Whittinghill</b>  | 616–624 | Using Handheld Computers for Instantaneous Feedback to Enhance Student Learning and Promote Interaction                                |
| <b>W. Hernandez</b>   | 625–633 | Instructional Material for Laboratory Sessions Aimed at Designing a Robust Low Distortion Audio Amplifier                              |
| <b>R. Kiliç and B. Karauz</b>   | 634–644 | Chaos Training Boards: Versatile Pedagogical Tools for Teaching Chaotic Circuits and Systems   |
