

# Editorial

---

This issue of the *IJEE* is the second issue of 2023. The issue has two sections; the first is a special issue on Current Issues in Asia-Pacific Engineering Education. It has twelve contributions: two from Taiwan, one from Thailand, five from China, two from Korea, one from USA/China, and one from India. The guest-editor is Prof. Pao-Nan Chou – National Pingtung University of Science and Technology, Taiwan.

I wish to thank Prof. Chou for suggesting the topic of the special issue and for the time and effort put forward in guest-editing the issue.

The second section has contributions in various topics related to engineering education including: Manufacturing, Curriculum Design, K-12 Education, Cross-Disciplinary Teams, Control Systems, Remote Experimentation, Newly-Hired Engineers, Aerospace Engineering, Project-Based Learning, Software Analytics, First-Year Students, and Student Success. The authors are from institutions in the USA, China, Spain, and Israel.

I would like to thank all the authors for their valuable contributions and I hope that the readers find both sections to be interesting.

Ahmad Ibrahim
